Exporting Tracks / Waypoints from the Hema Explorer App

This guide is designed to help you export existing data from the Hema Explorer App and upload to the Hema Explorer Cloud if the App is unable to complete a sync automatically.

Please note: This guide was written for Android devices running Hema Explorer v3.0.13. Some steps will be different for iOS or different versions of Android.

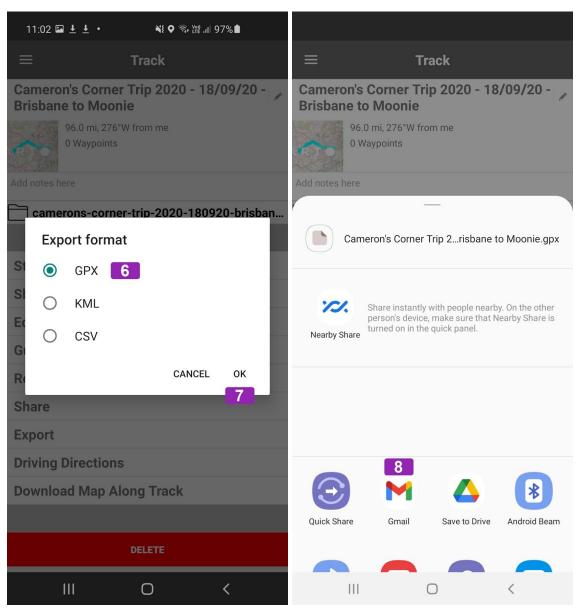

- Step 1: Open the Hema Explorer App on your device
- Step 2: Open the Main Menu in the top left corner.
- Step 3: For this example we will export a track, please click on Tracks in the Main Menu

Step 4: Select the Track you wish to export.

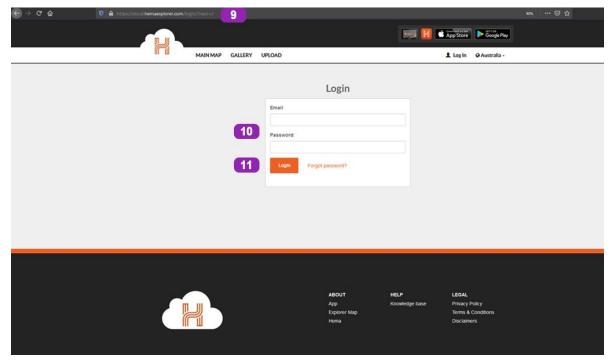

Step 5: From the Track Information page, click on the Export Heading.

Step 6: A popup window will appear and ask you to pick the format you would like to export, we recommend that you use the GPX format.

Step 7: Once you have selected the format please click OK.

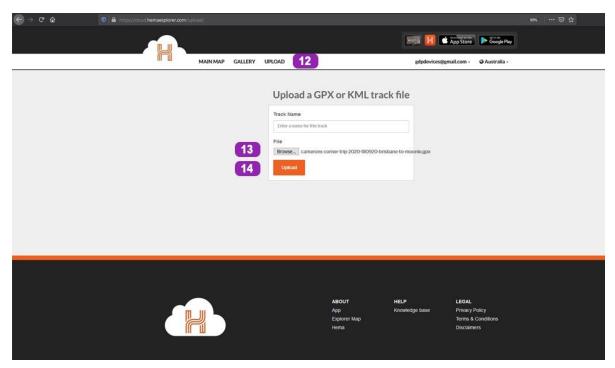

Step 8: You will then be asked how you want to export the information. We recommend emailing the GPX file to yourself and then uploading it to the Hema Cloud website.

Step 9: Open the Hema Cloud website in your browser at https://cloud.hemaexplorer.com.

Step 10: Enter the same username and password as your App

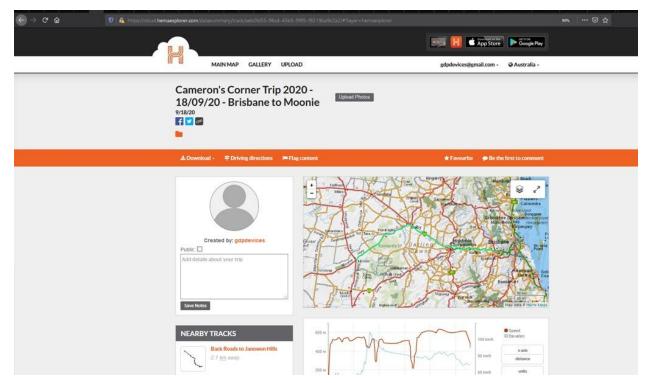

Step 11: Click Login

Step 12: Click the Upload heading.

Step 13: When the page loads, click either Browse or drag the file you want to upload onto the Browse button

Step 14: When the name of the file is displayed click Upload

When the track is uploaded you will see the Track Information Screen.
